Timber and Forestry

After more than 30 years working with clients in the harshest of conditions Saito has come to understand the special needs of the timber industry. Whether for chain of custody for the transport of a log for a forest owner to a mill or offshore, for yield purposes through a mill, or simply to identify a type of timber and where it was produced. Saito recognise that no timber operation is the same – even two mills side by side will have unique processes. Therefore, Saito have developed an 8-step process that we use to assess the business and recognise opportunities for efficiency gains, we call it Saito DNA - Detailed Needs Analysis.

The following is a snap shot of some of the products and services that we offer. But it is when we get around the table together through the DNA that we can map out operational efficiencies in process improvements and/or cost savings together.

Forest Tags, Log Tags, Timber Pack Tags

Saito developed HANDi-Flex™ Tags to meet the most demanding of requirements. HANDi-Flex™ Tags are virtually indestructible withstanding rain and sun for many months. The HANDi-Flex™ material has no grain and is virtually impossible to tear. Our customers have told us that in harsh weather conditions the tag pulls out the staples before it tears!

HANDi-Flex™
Strong | Durable | Flexible

Although this is a premium product with in-built strength that prevents easy removal, the volumes of tags we produce means HANDi-Flex™ is available at a very competitive price. Because of its strength it can be used at a thinner grade again offering serious savings. Saito have a wide range of common sizes and HANDi-Flex™ is also suitable for packs of timber being air-dried and stored for long periods. However, please note this product is not re-pulpable and is suitable for use in low temperature Kilns (90C). It is Strong | Durable | Flexible.

Kiln Tags

Xtremekiln Tags take over from HANDi-Flex™ tags and can withstand kiln temperatures up to 2350C. While bi-directional strength is slightly lower than the HANDi-Flex™ range it serves well in mill sites.

Timber Pack and Timber Piece Labelling

Timber pack labels produced in long-life synthetic face stock are available in a variety of colours. These are supplied in rolls which are designed to be printed on site using any of the commercially available label printers. Saito have an extensive range of common sizes used by mills across Asia Pacific. Saito also produce retail quality barcode labels to apply to finished wood products. These labels are able to be removed from the timber product leaving no residual adhesive.

Treated Timber Tagging

Treated timber tags that comply with all regulations are supplied as part of a complete labour-saving solution. The most common size is 18mm x 42mm (rolls of 1000) as used in tagging equipment. Saito specialises in this media which can be blank white and printed onsite or pre-printed in a range of colours. Optional safety and handling compliance information can be printed on the back of your tag.

Practical Productivity

Products available:

The FasTagger II automatically staples the tag to timber, cuts it, and then feeds the next tag into position. A special feed mechanism increases speed while decreasing chances for tag jam up. The FasTagger II is designed to let you change tag length or tag width in less than ten seconds.

- Attaches at over 100 tags per minute
- Weight 2.5 kilograms
- Multiple tag size settings
- Uses approved Polymer staples
- Site self-service approved
- Body constructed of one-piece, anodized billet aluminium
- Quick change Exchange stapler system (single screw)
- Air Pressure up to 90 PSI. Secure industrial rated coupling
- Long life cutter blades precisely cuts and staples the tags.
- Warranty 12 months (misuse and abuse excluded)
- Anti-Slip Grip helps prevent hand from slipping
- Can attach to uneven surfaces (up to 25mm deviation)

FasTagger® II

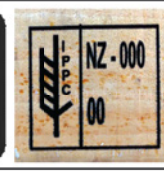

HANDi-Fasten™

Strong | Durable | Standardised

HANDi-Fastener™

Strong | Durable | Standardised

Alternatively, the The HANDi-Fastener™ is a manual option for smaller operations, together with the wide range of HANDi-Fasten™ Staples to suit all requirements.

Label and Tag Printers

Saito supply and service label and tag printers. We are able to source from a wide brand range. However, our preferred brand is TSC. These are available in desktop, light industrial and full industrial grades. TSC printers come with FREE basic label making software for integration to databases or more complex applications; Saito are agents for NiceLabel. Saito offer an extensive range of printer ribbon to print on labels and tags. **Plus** Saito offer ink jet solutions for imaging IPPC code or other grade information directly onto timber, we have extensive experience and expertise in this specialised field and solutions that work in the harshest environments.

Finally, Saito offer a wide range of data capture technology from scanners, through portable data terminals to rugged tablets.
